# Keynote speakers and panelists

## Stefanie Kunkel

Stefanie studied Economics in Dresden and Berlin. During her studies she gained experience in international environmental policy at the United Nations Environment Programme in Geneva, in the European Parliament in Brussels and during a research stay in Tokyo. In January 2019 Stefanie joined the RIFS, where she integrates her interest in technological progress as well as environment and development policy into her research work for the project "Digitalisation and Impacts on Sustainability", focusing particularly on the implications of digitalisation for sustainable value creation in countries of the Global South.

## David Tyfield

David's research focuses on the complex systems of processes of knowledge production and their interaction with issues of global cultural political economy, especially regarding critical analysis of the emergence of a globalised "knowledge-based" economy, climate change and the rise of China. These issues have become even more important and intertwined in recent years, amidst and as part of increasing global turbulence.

## Mark Edwards

Mark's research focuses on the connection between organizational sustainability and values as it appears at multiple levels across individual, firm and large-scale levels of change.

## Anna Ericson Öberg

Anna is currently Research Strategy Manager in Future Solutions at Volvo Construction Equipment Technology. She is also active in several research projects and received her PhD in Manufacturing Technology from Chalmers University of Technology. Anna's research interest lies in digitalization and manufacturing improvements in the intersection between the areas quality and production

## Josefin Hagström

Josefin Hagström is one of eight sustainability strategists at the municipality of Jönköping. The aim as a strategist is to lead, coordinate and develop the municipality-wide strategic work with social and environmental sustainability based on the governing principles of human rights and Agenda 2030.
