

Sustainability & Digitalization

Join us for a 2 day symposium discussing the topic of digitalization and its social and environmental consequences.

23 - 24 May 2023

Jönköping International Business School

This two-day symposium offers opportunities to discuss, learn about, and reflect on the complex relationship between sustainability and digitization, as well as the social and environmental impacts. Digitalization offers economic growth and sustainability advances through cost savings and efficiencies.

The symposium will provide a friendly forum for investigating this and similar claims regarding the social and environmental sustainability impacts of digitalization.

NETWORKING DINNER

Join us, together with practitioners, for a networking dinner to continue the conversation and discussion.
